

AI Research Paper Recommendation System

Requirements Gathering Questionnaire

Purpose: To collect requirements from students/researchers and administrators for the proposed AI-based research paper recommendation platform.

A. Student / Researcher Questionnaire

No.	Question	Response Type
Q1	How often do you search for research papers?	Multiple Choice
Q2	What platforms do you currently use to find research papers?	Multiple Choice
Q3	What difficulties do you face while searching for research papers?	Multiple Choice
Q4	Which filters are most useful to you?	Multiple Choice
Q5	Would you like papers to be recommended according to your research interests?	Yes / No
Q6	What information do you want to see when opening a research paper?	Multiple Choice
Q7	Would you like to save/bookmark papers for future reading?	Yes / No
Q8	Would you like the system to remember your previous searches?	Yes / No
Q9	Would you provide ratings or feedback on recommended papers?	Yes / No
Q10	How important is recommendation accuracy to you?	1–5 Rating
Q11	Would you like an explanation of why a particular paper was recommended?	Yes / No
Q12	What additional feature would you like in the system?	Open-ended

Suggested answer choices for important questions

Q3 – Common difficulties: Too many irrelevant papers; difficulty finding recent papers; different terminology for the same topic; time-consuming search; difficulty comparing papers.

Q4 – Useful filters: Author, topic, year, category, and keywords.

Q6 – Paper details: Title, authors, abstract, keywords, publication year, venue, and source link.

B. Administrator Questionnaire

No.	Question
Q1	Should administrators be able to manage registered users?
Q2	Should administrators be able to add, update, and delete paper records?
Q3	Should administrator access require authentication?
Q4	What user information should administrators be allowed to view?
Q5	What paper information should administrators be allowed to modify?
Q6	Should administrators be able to monitor system records?
Q7	Should different administrator roles/permissions be supported?
Q8	What type of system errors should be reported to administrators?

Expected outcome: identify user needs, pain points, desired features, security expectations, and administrator responsibilities before design and implementation.
